

PROJECT PLANNING

Visualization Tool for Electric Vehicle Charge and Range Analysis

1. Project Objective

The objective of this project is to develop an interactive visualization tool that helps users analyze electric vehicle data, compare vehicle performance, identify charging station availability, and make informed decisions using Tableau dashboards integrated with a MySQL database.

2. Project Scope

The project focuses on collecting electric vehicle datasets, storing them in a MySQL database, processing the data using SQL queries, and creating interactive Tableau dashboards. The solution helps users compare EV models based on range, efficiency, price, and charging infrastructure.

3. Project Milestones

Milestone	Completed
Dataset Collection	Completed
Database Creation	Completed
SQL Implementation	Completed
Dashboard Development	Completed
Story Creation	Completed

4. Project Schedule

Task	Duration	Status
Dataset Collection	2 Days	Completed
Database Design	2 Days	Completed
SQL Queries	3 Days	Completed
Tableau Visualization	4 Days	Completed
Dashboard & Story	3 Days	Completed
Documentation	3 Days	Completed

5. Resources Used

- MySQL Workbench
- Tableau Public
- Microsoft Excel
- Microsoft Word
- GitHub
- EV Datasets

6. Conclusion

The project was successfully planned and executed according to the defined milestones. Proper planning ensured timely completion of data collection, database implementation, dashboard development, documentation, and project delivery.
