

PROBLEM SOLUTION FIT

Visualization Tool for Electric Vehicle Charge and Range Analysis

Aspect	Description
Problem	Electric vehicle users find it difficult to compare vehicle specifications, charging stations, efficiency, and driving range from different sources.
Target Users	Electric vehicle buyers, EV owners, researchers, and automobile enthusiasts.
Proposed Solution	Develop an interactive Tableau dashboard integrated with MySQL to analyze EV data and charging station information.
Benefits	Easy comparison of EV models, interactive visualizations, faster decision-making, and improved understanding of EV performance.
Expected Outcome	Users can analyze electric vehicle information through a single dashboard instead of multiple websites.
Project Status	Successfully Completed

Conclusion

The proposed solution effectively addresses the challenges faced by electric vehicle users by providing a centralized and interactive dashboard. The project simplifies data analysis and supports informed decision-making through clear visualizations and comprehensive EV insights.
