

PROPOSED SOLUTION

Visualization Tool for Electric Vehicle Charge and Range Analysis

1. Introduction

The proposed solution is to develop an interactive data visualization system that helps users analyze electric vehicle information using Tableau Public. The solution integrates multiple datasets through MySQL and provides dashboards for comparing electric vehicle specifications, charging stations, efficiency, price, and driving range.

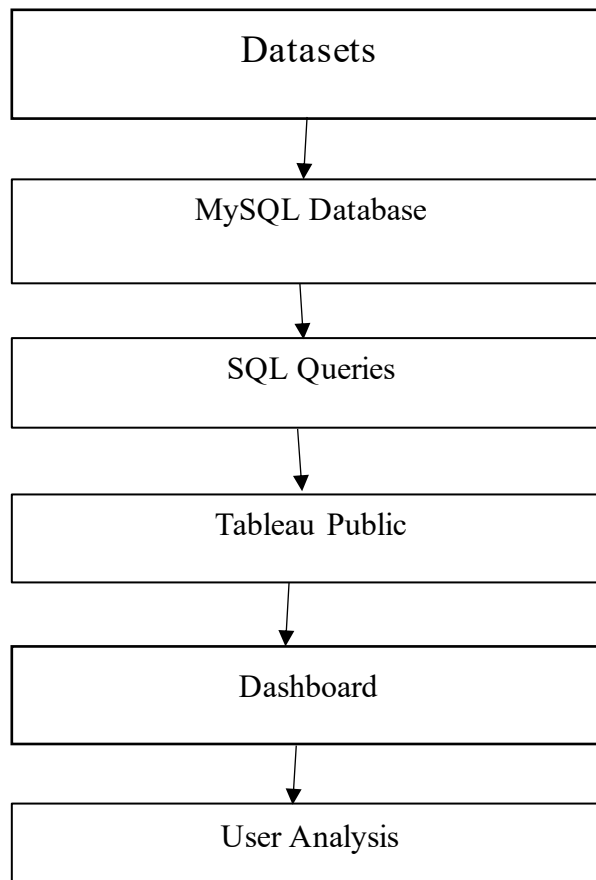

2. Objectives

- Compare electric vehicle performance.
- Analyze driving range and battery efficiency.
- Display charging station information.
- Provide interactive dashboards using Tableau.
- Help users make informed decisions.

3.Features

- Interactive Dashboard
- EV Range Analysis
- Brand Comparison
- Charging Station Analysis
- EV Efficiency Analysis
- Story Visualization
- SQL Database Integration

4. Working Process

5. Advantages

- Easy visualization of EV data.
- Quick comparison of electric vehicles.
- Better decision-making.
- User-friendly interface.
- Interactive dashboards and stories.
- Reliable analysis using SQL and Tableau.

6. Conclusion

The proposed solution provides an efficient platform for analyzing electric vehicle information. By integrating MySQL with Tableau Public, users can easily explore charging stations, vehicle range, efficiency, and pricing through interactive dashboards. This solution improves data accessibility and supports informed decision-making.
