

DATA FLOW DIAGRAM

Visualization Tool for Electric Vehicle Charge and Range Analysis

Description

The Data Flow Diagram (DFD) represents how electric vehicle data moves through the system. The project collects EV datasets, stores them in a MySQL database, processes the information, and visualizes it using Tableau dashboards to provide meaningful insights to users.

DFD Diagram

Conclusion

The Data Flow Diagram clearly illustrates the movement of data from datasets to the MySQL database, through SQL processing, into Tableau dashboards, and finally to the end user for analysis and decision-making.
