

Empathy Map

Project: Visualization Tool for Electric Vehicle Charge and Range Analysis

1. Says

- I want to know which electric vehicles provide the best driving range.
- I need information about charging stations before planning a trip.
- I want to compare electric vehicles based on price and efficiency.

2. Thinks

- Which electric vehicle is the most suitable for my budget?
- Are there enough charging stations available nearby?
- Which EV offers the best value for money?

3. Does

- Searches for electric vehicle information online.
- Compares different EV models and specifications.
- Reviews charging station availability.
- Analyzes dashboard visualizations before making decisions.

4. Feels

- Interested in eco-friendly transportation.
- Excited to explore electric vehicles.
- Concerned about battery range and charging infrastructure.
- Satisfied when information is presented clearly through dashboards.

Summary

The empathy map helps understand the needs and expectations of users interested in electric vehicles. It highlights their concerns regarding range, charging facilities, price, and efficiency. These insights guided the development of an interactive Tableau dashboard to support informed decision-making.
